# DANIEL CHRISTOPHER

**ANALYTICS AND MARKETING GRADUATE**

Manchester, UK | dccchidera@gmail.com
linkedin.com/in/daniel-christopher-3a42a0254 | danielcchristopher.github.io | Project titles link to case studies

**MSc Business Analytics (Predicted Distinction) | BA Digital Marketing, 2:1 | SQL, Power BI, Excel, SPSS, Python**

## PROFILE

Business Analytics graduate (studies completed; final MSc award pending) with a BA (Hons) Digital Marketing, 2:1, who turns messy information into clear, practical recommendations. Uses SQL, Power BI, Excel, statistics and Python across individual and team projects, from preparing 98,582 ecommerce orders for reporting to an ethically approved survey study of customer trust. Brings reliability and customer focus from security, hospitality and production work, plus fluent German. Available immediately.

## EDUCATION

**MSc Business Analytics, Predicted Distinction** | Manchester Metropolitan University — Sep 2025 to Sep 2026
Completed; final award pending. Modules: Business Statistics and Data Modelling; Decision Making and Data Visualisation; Artificial Intelligence and Machine Learning.

**BA (Hons) Digital Marketing, 2:1** | Birmingham City University — Sep 2022 to Sep 2024
Accelerated two year degree in customer behaviour, marketing analytics and market research. Individual final project: The Impact of AI on Marketing Strategies Targeting Generation Z.

**BTEC Business (Double Award), DD; A level German, B** | Xaverian College, Manchester — 2020 to 2022

## KEY SKILLS

| | |
|---|---|
| **BI and reporting** | Excel (dashboards, scenarios, optimisation), Power BI, Power Query, DAX, KPI reporting |
| **Data and SQL** | SQL (joins, window functions, aggregation), relational design, ERD, DFD, data quality, responsible data handling |
| **Statistics and ML** | SPSS, SAS Enterprise Miner, regression, mediation, factor analysis, classification |
| **Research and digital** | Survey design (Qualtrics), market research, consumer insight, Google Analytics (GA4) |
| **Python and AI** | Python (Pandas, validation checks, automated tests) in AI assisted projects |
| **Workplace** | Customer service, teamwork, reliable shift work, accurate incident records, English and German |

## PROFESSIONAL EXPERIENCE

**Security Officer** | Constant Security Services, Manchester — Oct 2025 to Present
- SIA licensed; works security shifts across Manchester client sites, maintaining accurate incident records and clear shift handovers.

## OTHER EMPLOYMENT

**Hospitality Host** | Manchester United, Old Trafford — Aug 2023 to Feb 2024
- Provided guest service in matchday hospitality suites, working alongside the floor team.

**Food Production Operative** | Greggs, Openshaw, Manchester (agency: The Best Connection) — Aug 2023 to Dec 2024
- Picked and packed bread products on production shifts.

**Housekeeper (temporary)** | Macdonald Portal Hotel, Tarporley (agency: Mint People) — Aug 2021 to Sep 2021

## ANALYTICS PROJECTS

**Ecommerce BI Dashboard and Python Rebuild** | Power BI, DAX, Python — MSc team project, then independent

- Our team cleaned 98,582 orders and 110,929 order items across eight linked Olist tables, fixing missing values, duplicates, orphaned keys and impossible delivery dates so the data could be trusted.
- We built a Power BI model with DAX measures and report pages on delivery, sellers and customer satisfaction, and presented the findings in a 15 minute group talk.
- Independently directed an AI assisted Python rebuild from our team's cleaned workbook, with reconciliation tests, published as an interactive portfolio dashboard.

**Gym Membership Churn Prediction** | SAS Enterprise Miner — Individual MSc project

- Compared decision tree, logistic regression and neural network models on 4,000 members (26.5% churn); selected the neural network at 95.6% validation accuracy against a 73.5% baseline from predicting no churn for everyone.
- Used the decision tree to explain which members to flag: the newest members (membership length under 1.5) churned at about 60% in training and validation data, so proposed risk tiered retention for new members, longer contract incentives and human review.

**Merchant Data Quality and SQL Database** | SQL, ERD, DFD — Four person MSc team project

- Our team audited 1,000 Uber Eats merchant records and found delivery fees missing for 99.7% and ratings for 58.2%, making pricing and performance analysis unreliable.
- We mapped the data flows and relationships, then built a normalised six table schema with keys and timestamped history, plus seven queries (joins, window functions, aggregation) to rank merchants by city and segment price tiers.

**Loan Affordability Risk Analysis** | SPSS — Four person MSc team project

- Our team analysed 44,986 public loan records for a Nationwide case study, flagging implausible values (such as 100 years of employment experience for borrowers aged 35) before fitting a 12 predictor regression (R squared .617).
- Because loan amount and income form the ratio itself, we read their coefficients with care; credit score and interest rate were not significant, and we reported heteroscedasticity and collinearity next to the results.

**AI Personalisation, Customer Trust and Loyalty** | Qualtrics, SPSS — Individual MSc dissertation

- Designed and ran an ethically approved survey of UK online shoppers (139 complete, eligible responses), with consent, completeness and duplicate checks, and analysed it in reproducible SPSS syntax using robust regression and mediation.
- Found an indirect association between perceived personalisation and self reported loyalty through trust, and recommended that retailers monitor trust alongside verified behaviour, explain personalisation and give customers control.

**Business Dashboard and Decision Model** | Excel — Four person MSc team project

- Our team built an interactive management dashboard (KPIs, slicers, drill down) in Excel.
- We tested 60% to 70% margin scenarios with simulation and sensitivity analysis, and used optimisation to recommend a location and store configuration.

**Restaurant Service Mix Analysis** | Python, Pandas — Independent public data project

- Directed an AI assisted, reproducible Python analysis of 244 public restaurant bills with input validation and three automated tests, comparing lunch with dinner and stating what an operator would need before changing staffing.

**Portfolio Website** | Next.js, GitHub Pages — Independent, ongoing

- Designs and maintains a live portfolio of case studies using a documented AI assisted workflow with written briefs, independent review and build checks before anything is published.

## CERTIFICATIONS

- Google Data Analytics Professional Certificate, Coursera (2025)
- Google Analytics GA4 (2025) | SQL (Basic), HackerRank (2025)
- DMI Certified Digital Marketing Associate (2024) | HubSpot Content Marketing (2025)

## ADDITIONAL INFORMATION

Native German, fluent English | Full UK driving licence | Open to hybrid, remote or relocation
